Spanish — Native

FRAYDER

camilo lopez

FULL STACK DEVELOPER · SOFTWARE ENGINEERING

PROFILE

Full stack developer in training and Software Engineering student. I build complete products across web, mobile and games: interfaces with React and Next.js, Android and Wear OS apps with Kotlin, Python backends and Unity experiences. I care about visual detail as much as logic: an interface should work well and feel good.

EXPERIENCE

Web development training

2025 — present

Academic

Building responsive interfaces with react, next.js, typescript and tailwind.

Interface design project

2025

Academic

Design and development of a complete web experience, from structure to launch.

Freelance project practice

2024 — 2025

Work

Building informational sites and digital prototypes tailored to different needs.

EDUCATION

Software Engineering

In progress

Universidad Cooperativa de Colombia

TECH STACK

Frontend

react · next.js · tailwind css · typescript · vite

Backend

node.js · python · flask · rest apis · postgresql · supabase

Mobile & games

kotlin · jetpack compose · wear os · unity

Design & workflow

figma · git + github · vscode

AI IN MY WORKFLOW

ChatGPT
Content ideation, writing and debugging

GitHub Copilot
Smart autocomplete and in-editor suggestions

Claude
Architecture review, documentation and prompt refinement

v0
Interface prototypes from text descriptions

FEATURED PROJECTS

AURA

video game · unity

View repository ↗

Three-level video game built in unity with c#.

THE PROBLEM
Create a game experience with progression: three levels that ramp up in difficulty and keep the player exploring.

MY ROLE
End-to-end development: level design, gameplay logic in c# and visual setup with the universal render pipeline.

unity · c#

WanderAI

android app

View repository ↗

Ai-powered travel assistant for android.

THE PROBLEM
Planning a trip means jumping between many apps; wanderai brings inspiration and recommendations together in one assistant.

MY ROLE
Built the app in kotlin with jetpack compose: screens, navigation, camera and user preferences.

kotlin · jetpack compose

Vibra

smartwatch · wear os

View repository ↗

Smartwatch app that guides navigation through vibrations.

THE PROBLEM
Looking at your phone while walking is distracting; vibra points the way with vibration patterns on your wrist, no screen needed.

MY ROLE
Built the wear os app in kotlin and compose, including the haptic patterns.

kotlin · jetpack compose · wear os

Nexora

web + local agent

View repository ↗

Automatic pc diagnosis that answers “why is it slow?”.

THE PROBLEM
When a computer is slow, technical metrics mean nothing to most people; nexora collects them and turns them into likely causes and fixes.

MY ROLE
Full stack development: python metrics collector, flask api, react + typescript + tailwind dashboard and supabase auth.

python · flask · groq (ai) · react · typescript · tailwind css · supabase
